

Team: Three Blind Mice
Members: Andrew Chang, Tanay Gavankar, Steven Kang
Project: Kitchen Inventory Tracker

Weekly Report for the Week of Feb. 13th

We have been meeting to finish deliverables and tackling some early stage development backlog items.

- Current Product Backlog: See attached
We began setting up the ground work for full development. The repository is populated with libraries and frameworks needed in the project. The repository can be found at <https://github.com/tgavankar/KIT>.
- Metrics
Earned Value = 36.75
Cost Performance Index = 2.83
Schedule Performance Index = 0.98
- Updated Risks: See attached
- Problems:
The UPC database suggested by the client is no longer available to the public, so we are forced to use an older, smaller version and perhaps think of a more robust way of handling UPCs not in the database.
- Time spent by each team member on each task in the previous week.
Include "overhead" tasks like producing reports, meeting, etc. You have a budget of 12 hours per week; you will lose credit if you are under 9 hours or over 16 hours. [10 points]
 - For individual developer work breakdown, see Sprint 1 attachment.
- Last client interaction:
 - We contacted the client with a second list of questions/updates a few days ago and are still awaiting response. The questions are not blocking issues pertaining to the development, but rather inquiries that would expedite (but not delay by lack thereof) the development process.
- QA Defects: None
- Date of current build:
 - There is no current build. Initial development environment can be found on our GitHub, <https://github.com/tgavankar/KIT>.
- Results of regression tests on the build : 0 total tests
- How well did you follow good SE process and practices?
The SCRUM master has been keeping the sprint 1 log up to date and our Project Manager has been in close contact with our client with email updates. We have not

had daily SCRUM meetings due to scheduling conflicts; however, we are able to meet roughly 3 times a week. Because we have lots of scheduling conflicts, we are trying to use other forms of communication to hold meetings (such as Skype).
